Therefore, practicing with actual logical reasoning questions with answers cat level is essential to build both speed and accuracy.

Types of Logical Reasoning Questions in CAT

Let?s take a look at some common categories of logical reasoning questions you?ll encounter:

Seating Arrangement: These questions involve placing people or objects in a

1.

particular order based on given clues.

Puzzles: Complex problems involving multiple variables and conditions.

2.

Syllogisms: Logical deductions based on given statements.

3.

Blood Relations: Questions testing your understanding of family relationships.

4.

Data Su?ciency: Determining if the provided data is enough to answer a

5.

question.

Logical Deductions: Drawing conclusions from a set of premises.

6.

Each type demands a strategic approach to interpreting the clues and arriving at the answer e?ciently.

Sample Logical Reasoning Questions with Answers CAT Level

To illustrate how to approach CAT-level logical reasoning questions, here are a few examples along with step-by-step solutions.

1. Seating Arrangement Example

Question: Seven people A, B, C, D, E, F, and G are sitting in a row facing north. B is to the immediate right of G. D is to the immediate left of F. A is to the immediate left of E. C is at one of the ends. Who is sitting in the middle?

Answer and Explanation:

Since they are facing north, the right and left are as per the row from left to right.

B is immediately right of G ? G, B

D is immediately left of F ? D, F

A is immediately left of E ? A, E

C is at one of the ends ? C can be at leftmost or rightmost.

Let's try placing C at the leftmost:

C, G, B, D, F, A, E

Check if all conditions are satis?ed:

B is immediate right of G ? yes (G, B)

D immediate left of F ? yes (D, F)

A immediate left of E ? yes (A, E)

C at one end ? yes (leftmost)

Seven people, the middle position is 4th. Therefore, D is sitting in the middle.

2. Syllogism Question

Question:

Statements:

All cats are animals.

Some animals are dogs.

Conclusions:

I. Some cats are dogs.

II. Some animals are cats.

Which conclusions follow?

Answer:

Only conclusion II follows.

Explanation:

Since all cats are animals, some animals are cats is true. However, "some cats are dogs"

cannot be concluded because the categories of cats and dogs don't necessarily overlap.

3. Blood Relation Question

Question:

Pointing to a man, a woman says, "He is the son of my grandmother?s only daughter."

How is the man related to the woman?

Answer:

The man is the woman's brother.

Explanation:

The woman?s grandmother?s only daughter is the woman?s mother. Therefore, the man is the son of the woman?s mother, which means he is the woman?s brother.
