The explanations in the icas 1998 maths answers show how to connect abstract math to tangible examples.

Breaking Down Sample Questions from the 1998 Paper

To better understand the icas 1998 maths answers, let?s look at a few representative problems and their solutions.

Sample Question 1: Number Pattern Identi?cation

Question: What is the next number in the sequence: 2, 4, 8, 16, ? ?

Answer Explanation: The sequence doubles each time (2 × 2 = 4, 4 × 2 = 8, etc.). Therefore, the next number is 16 × 2 = 32.

This kind of question emphasizes recognizing patterns quickly and verifying them by testing more than one term, a critical skill highlighted in the 1998 answers.

Sample Question 2: Geometry Problem

Question: Find the perimeter of a rectangle with length 7 cm and width 3 cm.

Answer Explanation: The perimeter P of a rectangle is given by P = 2(length + width).

Substituting values: P = 2(7 + 3) = 2 × 10 = 20 cm.

This straightforward application of geometric formulas is typical of many ICAS questions, which often test fundamental concepts applied clearly.

Sample Question 3: Fraction Calculation

Question: What is 3/4 of 20?

Answer Explanation: To ?nd 3/4 of 20, multiply 20 by 3/4: (3/4) × 20 = 15.

Understanding operations involving fractions is vital, and the icas 1998 maths answers provide clear stepwise methods to reinforce these operations.
