Understanding the Question Answer Relationship (QAR) Strategy in Math

What is the QAR Strategy?

The Question Answer Relationship (QAR) strategy is a comprehension framework that helps students categorize questions based on where the answers can be found or how they should be approached. Originally developed in literacy education, the QAR approach has been adapted successfully for math instruction to improve problem-solving skills and conceptual understanding.

In essence, the QAR strategy encourages students to recognize the types of questions they are asked?whether they require information from the text, their own reasoning, or a combination of both. This awareness guides students to select appropriate strategies for finding answers, leading to more accurate and efficient problem-solving.

Types of QAR Questions in Mathematics

In math lessons, questions typically fall into four categories aligned with the QAR framework:

- Right There Questions

- The answer is explicitly stated in the problem or data provided.
- Example: "What is the sum of 8 and 5?" (Answer: 13)

- Think and Search Questions

- The answer is found by combining information from different parts of the problem or data set.
- Example: "Using the data table, which number appears most frequently?"

- Author and You Questions

- Require students to interpret, analyze, or apply their understanding beyond the given information.
- Example: "If you double the number of apples, how many apples will you have?" (Requires reasoning)

- On My Own Questions

- Based on students? prior knowledge or experiences; do not require specific data from the problem.
- Example: "Have you ever solved a problem involving fractions before?"

By the end, educators will gain a comprehensive understanding of how to incorporate QAR to enhance students? mathematical reasoning and problem-solving skills.

Understanding the QAR Strategy: Foundations and Principles

What is QAR?

The Question Answer Relationship (QAR) strategy is a questioning technique that categorizes questions based on where students can find the answers and the cognitive approach required to respond. It emphasizes understanding the relationship between questions and answers, enabling students to select appropriate strategies for different types of questions.

In mathematics, QAR helps students recognize whether an answer is directly found in the problem, requires inference, or involves applying prior knowledge. This awareness fosters independent thinking and strategic problem-solving.

The Four Types of QAR Questions in Math

In adapting QAR to math, questions are typically classified into four categories:

- Right There Questions

- Definition: The answer is explicitly stated in the problem or data provided.
- Example: "What is the sum of 8 and 5?" (Answer: 13, found directly in the problem statement.)
- Strategy: Locate the specific information directly in the question; retrieval-based.

- Think and Search Questions

- Definition: The answer is gathered by connecting different parts of the problem or text; requires integrating information.
- Example: "What is the total cost of 3 notebooks costing $4 each?" (Students find the unit cost and multiply.)
- Strategy: Search across the problem, analyze multiple data points, and synthesize information.

- Author and You (Critical Thinking) Questions

- Definition: The answer is not explicit; students need to interpret, infer, or apply their prior knowledge.
- Example: "If a rectangle has a length of 10 units and a width of 4 units, what can you say about its perimeter?" (Requires applying formula and reasoning.)
- Strategy: Use prior knowledge and reasoning to infer or derive the answer.

- On My Own Questions

- Definition: The answer depends largely on the student's own experience or prior knowledge, not necessarily on the problem data.
- Example: "Have you ever calculated the area of a soccer field? How did you do it?"
- Note: While more common in reading, in math, these can take the form of reflection questions or personal connections.

Theoretical Foundations of QAR in Math Instruction

Why Use QAR in Math? The Cognitive and Pedagogical Rationale

The QAR strategy aligns with several educational theories:

- Metacognition: It encourages students to think about their thinking?recognizing the type of question asked guides them to select suitable problem-solving strategies.
- Reading Comprehension and Transfer: Originally designed for reading, QAR's principles support transfer to math by recognizing question types and their corresponding approaches.
- Constructivist Learning: Students actively construct understanding by identifying whether answers are explicit or require inference, fostering deeper engagement.
- Differentiated Instruction: QAR allows teachers to tailor questions according to student readiness, challenging advanced learners while supporting struggling ones.

Alignment with Common Core and Other Standards

The strategy dovetails with standards emphasizing mathematical practices such as:

- Reasoning abstractly and quantitatively.
