thin lens practice answer key

Understanding the principles of thin lenses is fundamental in physics, especially in optics. The "thin lens practice answer key" serves as a valuable resource for students and educators to verify their understanding, practice problem-solving skills, and master the concepts related to image formation, lens formulas, and magnification. This article provides an in-depth exploration of thin lens concepts, accompanied by practice questions, detailed solutions, and explanations to enhance comprehension and confidence in solving related problems.

Introduction to Thin Lenses

What is a Thin Lens?

A thin lens is an optical device with a thickness much smaller than its focal length and radius of curvature. It is designed to bend (refract) light rays in such a way that they converge or diverge to form images. Thin lenses are typically classified into two types:

- **Convex lenses** (converging lenses): These lenses cause parallel rays of light to converge to a focal point.
- **Concave lenses** (diverging lenses): These lenses cause parallel rays of light to diverge as if they originate from a focal point behind the lens.

Principle of Operation

Thin lenses operate based on refraction, which depends on the curvature of the lens surfaces and the refractive index of the material. When light passes through a thin lens:

- It bends at the first surface.
- Continues through the lens material.
- Refracts again at the second surface.

The behavior of the rays determines the nature, position, and size of the resulting image.

Lens Formula and Magnification

Lens Formula

The primary equation governing thin lenses is the lens formula:

$$\frac{1}{f} = \frac{1}{v} - \frac{1}{u}$$

where:

- **f** = focal length of the lens
- **v** = image distance from the lens
- **u** = object distance from the lens

Note: Sign conventions are crucial. For real images, v is positive; for virtual images, v is negative. Similarly, u is negative if the object is on the same side as the incoming light.

Magnification

Magnification (M) describes the size of the image relative to the object:

$$M = \frac{h'}{h} = \frac{v}{u}$$

where:

- **h'** = height of the image
- **h** = height of the object

A positive M indicates an upright image; a negative M indicates an inverted image.

Types of Images Formed by Thin Lenses

Real and Virtual Images

- Real images: Formed when light rays actually converge; can be projected onto a screen; usually inverted.
- Virtual images: Formed when rays appear to diverge from a point; cannot be projected; usually upright.

Characteristics Based on Object Distance

| Object Distance (u) | Image Nature | Image Position | Magnification | Image Inversion |

|-----|-----|-----|-----|-----|

| > 2f | Real, inverted | Between f and 2f |

| at 2f | Real, inverted | At 2f | 1 | Yes |

| between f and 2f | Real, inverted | Beyond 2f | > 1 | Yes |

| at f | No image (at infinity) | - | - | - |

| 1 | No |

Practice Questions and Model Answers

Question 1: Determining Image Position and Nature

An object is placed 30 cm in front of a convex lens with a focal length of 15 cm. Find:

- The position of the image.
- The nature of the image (real or virtual, upright or inverted).
- The magnification.

Solution 1

Given:

- Object distance, $(u = -30\text{ cm})$ (since object is in front of the lens)
- Focal length, $(f = +15\text{ cm})$ (positive for convex lens)

Using lens formula:

$\frac{1}{f} = \frac{1}{v} - \frac{1}{u}$

$$\frac{1}{15} = \frac{1}{v} - \frac{1}{-30}$$

$\frac{1}{v} = \frac{1}{15} - \frac{1}{-30}$

$$\frac{1}{v}$$

$$\Rightarrow \frac{1}{15} = \frac{1}{v} - \frac{1}{-30}$$

$$\frac{1}{v}$$

$$\frac{1}{v}$$

$$\Rightarrow \frac{1}{15} = \frac{1}{v} + \frac{1}{30}$$

$$\frac{1}{v}$$

$$\frac{1}{v}$$

$$\Rightarrow \frac{1}{v} = \frac{1}{15} - \frac{1}{30} = \frac{2}{30} - \frac{1}{30} = \frac{1}{30}$$

$$\frac{1}{v}$$

$$\frac{1}{v}$$

$$\Rightarrow v = 30 \text{ cm}$$

$$\frac{1}{v}$$

Answer:

a) The image is formed 30 cm on the opposite side of the lens.

b) Since (v) is positive, the image is real and inverted.

c) Magnification:

$$\frac{1}{v}$$

$$M = \frac{v}{u} = \frac{30}{-30} = -1$$

$$\frac{1}{v}$$

The negative sign indicates the image is inverted and of same size as the object.

Question 2: Magnification and Image Size

An object 10 cm tall is placed 20 cm in front of a convex lens with a focal length of 10 cm. Determine:

- The position of the image.
- The size of the image.
- Whether the image is upright or inverted.

Solution 2

Given:

- $(u = -20\text{ cm})$
- $(f = +10\text{ cm})$
- Object height, $(h = 10\text{ cm})$

Using lens formula:

$\frac{1}{f} = \frac{1}{v} - \frac{1}{u}$

$$\frac{1}{f} = \frac{1}{v} - \frac{1}{u}$$

$\frac{1}{10} = \frac{1}{v} - \frac{1}{-20}$

$\frac{1}{10} = \frac{1}{v} + \frac{1}{20}$

$$\Rightarrow \frac{1}{10} = \frac{1}{v} - \frac{1}{-20} = \frac{1}{v} + \frac{1}{20}$$

$\frac{1}{10} - \frac{1}{20} = \frac{1}{v}$

$\frac{2}{20} - \frac{1}{20} = \frac{1}{v}$

$$\Rightarrow \frac{1}{v} = \frac{2}{20} - \frac{1}{20} = \frac{1}{20}$$

$v = 20\text{ cm}$

$v = 20\text{ cm}$

$$\Rightarrow v = 20\text{ cm}$$

\]

Image size:

\[

$$h' = M \times h$$

\]

\[

$$M = \frac{v}{u} = \frac{20}{-20} = -1$$

\]

\[

$$h' = -1 \times 10\text{ cm} = -10\text{ cm}$$

\]

Answer:

- The image is formed 20 cm on the opposite side of the lens.
- The image height is 10 cm and inverted.
- The image is real, inverted, and of same size as the object.

Question 3: Virtual Image Formation

An object is placed 5 cm in front of a concave lens with a focal length of 10 cm. Find:

- a) The position of the image.
- b) The nature of the image.
- c) The magnification.

Solution 3

Given:

- $u = -5\text{ cm}$
- $f = -10\text{ cm}$ (negative for concave lens)

Lens formula:

[

$$\frac{1}{f} = \frac{1}{v} - \frac{1}{u}$$

]

[

$$\Rightarrow \frac{1}{-10} = \frac{1}{v} - \frac{1}{-5} = \frac{1}{v} + \frac{1}{5}$$

]

[

$$\Rightarrow \frac{1}{v} = -\frac{1}{10} - \frac{1}{5} = -\frac{1}{10} - \frac{2}{10} = -\frac{3}{10}$$

]

[

$$\Rightarrow v = -\frac{10}{3} \approx -3.33\text{ cm}$$

]

Magnification:

[

$$M = \frac{v}{u} = \frac{-3.33}{-5} = 0.666$$

]

Answer:

- The image is virtual and located approximately 3.33 cm on the same side as the object.
- The image is upright (since magnification is positive).
- The image is virtual, upright, and smaller than the object.
