Sample Questions and Model Marked Answers from October November 2012

Question 1: Describe the structure of a typical plant cell. (3 marks)

Sample Answer:

A typical plant cell has a cell wall made of cellulose, a cell membrane, a nucleus that controls cell activities, cytoplasm where chemical reactions occur, chloroplasts for photosynthesis, and a large central vacuole filled with cell sap. (Full marks awarded for mentioning all key components with brief descriptions).

Question 2: Explain how enzymes work to speed up chemical reactions. (4 marks)

Sample Answer:

Enzymes are biological catalysts that lower the activation energy needed for reactions to occur. They work by binding to the substrate at the active site, forming an enzyme-substrate complex.
