Understanding Electromagnetic Numerical Methods

Before diving into MATLAB code examples, it's crucial to understand the numerical methods used to solve electromagnetic problems. Electromagnetic equations, primarily Maxwell's equations, often require numerical techniques for complex geometries and boundary conditions.

Finite Difference Method (FDM)

The FDM discretizes the continuous spatial domain into a grid and approximates derivatives using difference equations. It is widely used for wave propagation problems, such as solving the Helmholtz or wave equations.

Finite Element Method (FEM)

FEM subdivides the problem domain into smaller elements, like triangles or tetrahedra, and employs variational methods to construct approximate solutions. It is highly flexible for complex geometries and boundary conditions.

Method of Moments (MoM)

MoM transforms integral equations into a system of linear equations, often used in antenna analysis and scattering problems.

Example 1: Simulating Electric Field in a 2D Domain Using Finite Difference Method

This example demonstrates solving Laplace's equation to find the electric potential distribution in a 2D region with fixed boundary conditions.

```
```matlab

% Define grid size

nx = 50; ny = 50;

V = zeros(ny, nx);

% Boundary conditions

V(:,1) = 1; % Left boundary at 1V
```

```
V(:,end) = 0; % Right boundary at 0V

V(1,:) = 0; % Top boundary at 0V

V(end,:) = 0; % Bottom boundary at 0V

% Set convergence parameters

tolerance = 1e-4;

max_iter = 10000;

for iter = 1:max_iter

 V_old = V;

 for i = 2:ny-1

 for j = 2:nx-1

 V(i,j) = 0.25(V_old(i+1,j) + V_old(i-1,j) + V_old(i,j+1) + V_old(i,j-1));

 end

 end

 % Check for convergence

 if max(max(abs(V - V_old)))
 break;
 end

end

% Plot the potential distribution

```

```
ylabel('Y');
```

```
```

- Discretize the antenna into segments
- Formulate the integral equations for current distribution
- Assemble the impedance matrix
- Solve for currents
- Calculate far-field radiation pattern

A simplified snippet demonstrating the assembly of the impedance matrix:

```
```matlab
```

```
% Number of segments
```

```
N = 50;
```

```
% Initialize matrices
```

```
Z = zeros(N,N);
```

```
I = ones(N,1); % Excitation current
```

```
% Loop over segments to compute mutual impedance
```

```
for m = 1:N
```

```
for n = 1:N

 if m == n

 Z(m,n) = 73; % Self-impedance approximation for dipole

 else

 R = distance_between_segments(m, n); % Define function for segment distance

 Z(m,n) = j120pilog(1/R);

 end

end

end

end

% Solve for currents

I = Z \ V; % V is excitation voltage vector

% Calculate radiation pattern based on currents
