Key Features of Business Objects:

- Data visualization through dashboards and reports
- Ad-hoc querying capabilities
- Data integration from multiple sources
- User-friendly interface for report design
- Centralized data management and security

Understanding the Architecture of Business Objects

Before diving into tutorials, it's essential to understand the typical architecture components of Business Objects.

1. Data Source Layer

This is where raw data resides, such as databases, data warehouses, or external sources like Excel

files.

2. Data Access Layer

Tools like Universes or Data Federator connect to data sources, creating an abstraction layer that simplifies data access for users.

3. Business Objects Layer

Includes tools like Web Intelligence, Crystal Reports, and dashboards that allow users to create reports and analyze data.

4. Presentation Layer

The user interface where reports, dashboards, and visualizations are shared and interacted with.

Understanding these layers helps in troubleshooting, designing efficient reports, and optimizing data flow.

Key Components of Business Objects for Beginners

To effectively learn and use Business Objects, familiarize yourself with its main components:

1. Universes

Universes are semantic layers that map complex database structures into user-friendly, business-oriented terms. They act as a bridge between raw data and end-users.

2. Web Intelligence (WebI)

A powerful reporting tool that allows users to create, modify, and analyze reports directly within a web browser.

3. Crystal Reports

Used for designing highly formatted, pixel-perfect reports suitable for operational reporting.

4. Dashboards and Xcelsius

Tools for creating interactive dashboards that visualize data in real-time.

5. Central Management Console (CMC)

The administrative interface for managing user privileges, scheduling reports, and configuring the system.
