Dissecting the Shark: Exploring Cartilaginous Fish Anatomy

Why Study Sharks?

Sharks are among the most ancient vertebrates, with a lineage dating back over 400 million years. Their unique cartilaginous skeletons and highly developed sensory systems make them ideal subjects for understanding vertebrate evolution and marine biology.

Key Dissection Objectives

- Understanding the Skeleton: Unlike bony fish, sharks have skeletons made of cartilage, which is lighter and more flexible.
- Examining the Respiratory System: The gill structures are crucial for understanding aquatic respiration.
- Studying the Senses: Sharks possess highly specialized sensory organs, such as the ampullae of Lorenzini.

Dissection Procedure

- Preparation: Place the shark on a dissection tray, securing it firmly. Use gloves and safety goggles.
- Initial Incisions: Make a dorsal incision from the tail to the head, careful to avoid damaging internal organs.
- Exposing the Musculature and Skeleton: Gently peel back the skin and muscle layers to reveal the cartilage skeleton.
- Examining the Gills: Locate the gill slits on each side; observe the gill arches, filaments, and lamellae.
- Internal Organs: Carefully dissect to expose the liver, stomach, intestines, and reproductive organs.

- Sensory Structures: Identify the lateral line system and the ampullae of Lorenzini.

Educational Insights

Studying sharks highlights adaptations like their streamlined bodies for efficient swimming, their electroreceptive organs for prey detection, and their unique jaw mechanisms. Such knowledge underscores evolutionary links to other vertebrates, including humans.

Dissecting the Frog: Understanding Amphibian Anatomy

Why Dissect Frogs?

Frogs are classic model organisms in anatomy classes because their accessible internal organs and external features make them ideal for educational dissection. They provide insights into both aquatic and terrestrial adaptations characteristic of amphibians.

Key Dissection Objectives

- Exploring Organ Systems: Observe the digestive, circulatory, respiratory, and reproductive systems.
- Understanding Metamorphosis: Recognize the differences between larval and adult structures.
- Studying Respiratory Adaptations: Compare cutaneous respiration with lung function.

Dissection Procedure

- Preparation: Set the frog on its belly, securing limbs to prevent movement.
- Incisions: Make a careful midline cut along the belly from the cloaca to the mouth.
- Reflecting the Skin: Gently peel back the skin to reveal muscles and organs.
- Exposing Internal Organs: Identify the heart, lungs, liver
